RE: Internship Application in Software Development – Work Integrated Learning Placement

Dear Sir/ Madam

With great passion and excitement, I am writing to apply for an internship opportunity as part of my **Work Integrated Learning** (WIL) program at the Namibia University of Science and Technology (NUST). As someone who has grown up solving tech problems at home and transforming ideas into digital experiences, this internship means more to me than a requirement it's a chance to live out what I love and contribute meaningfully to your team.

From the moment I laid my hands on a school computer, I was hooked. I vividly remember getting chased out of class once not for mischief but for designing a stickman software robot on paper. That playful creativity matured over the years, and today, I am proud to say I have built real-world systems such as a **Water Management System**, a **Client Management System**, and learning platforms that support training workflows and reporting.

Thanks to my academic experience, I've gained hands-on skills through practical modules such as:

- **Software Design** (system modeling, SDLC, verification/validation)

- **Database Programming** (MySQL, triggers, procedures, relational models)

- **Web Development** (HTML, CSS, JavaScript, PHP, Node.js)

- **Mobile App Development** (Android Studio, Kotlin, Flutter basics)

- **Distributed Systems** (APIs, gRPC, Ballerina, logistics microservices)

I'm fluent in **Java, Python, SQL, PHP**, and I enjoy designing user interfaces using **Figma** and **Canva**. I've led team-based software projects, built web systems for real clients, and presented solutions that combine design thinking with scalable code. Most recently, I developed a smart livestock management system using full-stack tools and built an API-based logistics delivery service in **Ballerina** as part of my Distributed Systems module.

But what truly sets me apart is my hunger to learn and grow. I am quiet by nature, but I speak loudly through code, design, and clean, innovative solutions. I don't just fix phones or debug code I build systems that make people's lives easier. Whether it's UI/UX design, mobile apps, backend systems, or web platforms, I put heart into everything I do.

Being part of your organization would not only fulfill my WIL goals but give me the professional space to grow and give back. I would be honored to join a company that believes in its people and invests in young minds ready to shine.

Thank you for considering my application. I truly hope to bring value, energy, and purpose to your team.

With deep respect and excitement,
Lineekela Tangi Haihambo
